

# Results of use of EKOLAK and EKOFISH MEAL on farm "Petefi" at Temerin

**As the manager of farm "Patefi" Mr. Gone Pejcov said** that since they included milk replacement **EKOLAK** and herbal replacement for fish meal **EKOFISH MEAL** ( both products of fabric **BIOPROTEIN**, Obrenovac) in full mixture for pig feeding production, results on their farm in this critic category was quite improved.

Pigs likely eat their feed, get used to concentrate much faster, the weight gain is good, there are less health problems and of course mortality rate is reduced. What is very important, the most important is to grow a pig up to 25 kg. After that period, there are no problems at all.

**"Since we started to use EKOLAK and EKOFISH MEAL, besides a greater weight gain, also reduced mortality had a significant effect on financials. Now we have 2% reduced mortality rate at suckling piglets and for about 2% reduced mortality rate at weaning piglets. Our farm, per year produce about 15.000 of fattening pigs, it's about 500,600 fattening pigs more. It is easy to see how much many we save."**
